INTRODUCTION

ZOWIE Technology Corporation founded in 1994 is a leading designer and manufacturer of advanced discrete semiconductor products. The inaugurators, Ding-Hua Hu and George Tai are the well-known leaders in the semiconductor field in Taiwan. Since there is no new significant progress in diode products for more than 20 years they decided to endeavor their efforts to this industry with innovation and futurity. So they established ZOWIE Technology Corporation to develop new technology in order to supply better and new diodes for the industrial. The leaders, George Tai who has about thirty years experience in the rectifier engineering field and Harrison Chung who is expert on I.C. package technology and fine ceramic materials, lead a team of professional researchers to improve the traditional diodes. It is ZOWIE's goal to develop "the New Generation Diodes". ZOWIE's technological experts put 4 years efforts in researching and developing the new products. Finally, ZOWIE succeed. The new product-GPRC (Glass Passivated Rectifier Chip) successfully went through the first tryout in 1995 and then it officially marketed in 1998. At the same time, the new package technology-SCD (SuperChip Diode), the very first chip package diode of the world, was available in Q2, 2001.

All the products of ZOWIE are the world's first leading technology through its own newly constructive design, manufacturing and superior materials. Up to now, ZOWIE has received numerous worldwide patents, including Taiwan, the U.S.A., Mainland China, the U.K. and Japan.

NOTES : (1) Vz is tested with pulses (20 ms)

(2) Nominal Zener voltage is measured with the device junction in thermal equilibrium at $T_L = 30^\circ C \pm 1^\circ C$

(3) ZzT and ZzK are measured by dividing the AC voltage drop across the device by the AC current applied.

The specified limits are for $Iz(AC) = 0.1 Iz(DC)$ with the AC frequency = 1KHz.

NOTES : (1) V_Z is tested with pulses (20 ms)

(2) Nominal Zener voltage is measured with the device junction in thermal equilibrium at T_L = 30°C ± 1°C

(3) Z_{ZT} and Z_{ZK} are measured by dividing the AC voltage drop across the device by the AC current applied.

The specified limits are for I_{Z(AC)} = 0.1 I_{Z(DC)} with the AC frequency = 1KHz.

NOTES : (1) The Zener Impedance is derived from the 60Hz AC voltage which results when an AC current having an RMS value equal to 10% of the Zener current (I_{ZT} or I_{ZK}) is superimposed on I_{ZT} or I_{ZK}. Zener Impedance is measured at two points to insure a sharp knee on the breakdown curve and to eliminate unstable units.

(2) Valid provided that leads at a distance of 8 mm from case are kept at ambient temperature.

(3) Tested with pulses t_p = 20 ms.

NOTES : (1) The Zener Impedance is derived from the 60Hz AC voltage which results when an AC current having an RMS value equal to 10% of the Zener current (IzT or Izk) is superimposed on IzT or Izk Zener Impedance is measured at two points to insure a sharp knee on the breakdown curve and to eliminate unstable units.

(2) Valid provided that leads at a distance of 8 mm from case are kept at ambient temperature.

(3) Measured under thermal equilibrium and DC test conditions.

(4) The rating listed in the electrical characteristics table is maximum peak, non-repetitive, reverse surge current of 1/2 square wave or equivalent sine wave pulse of 1/120 second duration superimposed on the test current IzT.

(5) Tested with pulses tp = 20 ms.
