The standard diameter and electrical data series (标准管径及电气技术数据)	10
Parameters for outdoor units (室外机参数)	11

Features of HIMOD M series (HIMOD M 系列产品特点) :

HIMOD M series is launched in 2005. It has all of the advantages of HIROSS series modular room air-conditioning, high precision temperature and humidity control, and diffuse type air supply. Cooling capacity is from 25 to 110 kW. The micro processing controller comes with the password protection, expert fault diagnosis function, phase sequence detection function, and the call for the start.

HIMOD M 系列是公司 2005 年新推出的机型，秉承 HIROSS 系列模块化机房专用空调的全部优点，高精度恒温恒湿控制与弥漫式送风。制冷量从 25 到 110 kW。微处理控制器具有密码保护、专家故障诊断功能、相序检测功能、和可实现来电自启动。

Environmental control: communication room, network center, satellite control center, IDC data center, power room, laboratory, training center, standard room, clean room, industry control center, precision machine center, UPS and battery room, and etc.

环境控制领域：电信交换机房、网管中心、卫星控制中心、IDC 数据中心、动力机房、实验室、培训中心、标准室、洁净室、工业控制中心、精密加工中心、UPS 机房和电池室等。

Network center
网管中心

IDC data center
IDC 数据中心

Battery room
电池室

Laboratory
实验室

Advantages: (特点)

- Advanced intelligent control technology (先进智能化控制技术)
- Highly reliable (高可靠性)
- Fully front maintenance (全正面维护)
- Network management function (网络管理功能)
- High SHR (高显热比)
- Advanced microcomputer controller (先进的微电脑控制器)
- Structure design for easy operation and maintenance (易操作维护的结构设计)
- High efficient compressor (高效压缩机)
- Step less and low noise air-cooling condenser (无级调速低噪风冷冷凝器)
- EC fan (EC 风机)
- Unit with humidifying function (加湿功能的机型)
- Unit with heating function (加热功能的机型)
- Air filter (空气过滤器)
- The unit can adapt to outdoor environment very wide. The general model is suitable for the temperature from -15 °C to +45 °C, and the LEE-TEMP model is good for the temperature from -34 °C to +45 °C. The heating is not affected by temperature conditions. (可适应极宽温度的室外环境。普通型在-15°C~+45°C范围内工作，LEE-TEMP 机型在-34°C~+45°C范围内工作。加热不受温度条件限制)
- Comprehensive configurations: conventional air-cooled, water-cooled, chilled water, double cold source, natural cooling, high precision (applicable to the temperature and humidity particularly high requirements of the occasion ± 0.3 °C, ± 2%). (全面的机型配置：常规风冷式、水冷式、冷冻水型、双冷源型、自然冷却型、高精度型(适用于特别高的温湿度要求的场合±0.3° C, ± 2%))

Humidification technology (加湿技术) :

A. Ultrasonic humidifier is the use of ultrasonic vibration to achieve humidification. Ultrasonic humidification technology has advantages such as high efficiency, low power consumption, good stability, and high security features. It can achieve temperature and humidity control independently without disturbing each other.

A. 超声波加湿器是利用高效的超声波振动实现加湿的技术。超声波加湿技术具有加湿效率高、电耗低、稳定性好、安全性高等特点，可以实现温度控制与湿度控制的相互独立、互不干扰。

B. Electrode humidifier is the use of the electrode by passing a current through the water for humidifying. When water enters the electrode humidification barrels, the water level rises gradually, until the water swept over the electrode, the electrode will constitute a current loop through the water, with the water and ions move to boil water for generating clean steam.

B. 电极加湿器是利用电极棒在水中通入电流来进行加湿。当电极加湿桶内的水位漫过加湿罐内的电极时，电极将通过水构成电流回路，借助水中的离子移动将水加热沸腾，以产生洁净水蒸汽。

C. Electric humidifier is the use of current through the resistor to generate heat. Electrical energy is converted into heat energy. Electric heating pipe submerged in water, and heating pipes generate heat, so that the water boils into water vapor. Characteristics of electric heating are stable and reliable performance, long life, less maintenance, and safety circuit design.

C. 电热式加湿器是利用电流通过电阻产生热，电能转换成热能的原理，电加热管浸没在水中，电热管产生热量，使水沸腾变成水蒸汽。电加热特点：性能稳定可靠、寿命长、维护工作量小、安全电路设计。

D. Infrared humidifier mainly is the use of infrared radiation passing through the water surface to generate steam. The air supply system delivers steam into the space, so as to achieve the purpose of humidification. Infrared humidifier features are high efficiency and low maintenance, high humidification speed for poor water quality, and pure water vapor without debris.

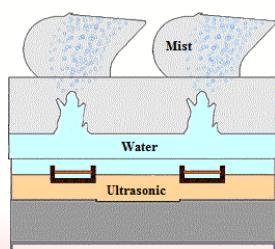

D. 红外线加湿器主要透过红外热辐射使水表面在红外线作用下产生热量进而蒸发，经过送风系统把水蒸汽输送到空间来达到加湿的目的。红外线加湿器特点：高效低维护量、加湿速度快适用恶劣水质、蒸发出纯净的水蒸气不含杂质。

E. Wet film humidifier is the use of water from the top of the wet film through the trap along a corrugated uniform surface of wet film, so that the wet film is uniformly moist. When the dry hot air flows through the wet membrane surface, the heat-exchange is between water and hot air. The result will increase the humidity. Wet film humidifier features are simple structure, low maintenance cost, and high humidification speed.

E. 湿膜加湿器主要透过水从湿膜的顶部通过疏水器沿湿膜的波纹表面均匀流下，使湿膜均匀的湿润，当热空气流过湿膜的表面，就会与湿膜中的水分进行热交换，增加空气的湿度。湿膜加湿器特点：结构简单、维护费用低、加湿速度快。

F. High-pressure spray humidifier is the use of pressurized water through ultra-fine filter. Through a special high-speed high-pressure nozzle generates mist formation of $3 \sim 15\mu\text{m}$ particle. The heat exchange is between hot air and mist resulting in humidity increasing. The humidification is achieved and it also plays a role in controlling dust.

F. 高压喷雾加湿器是利用水经加湿器主机增压并通过超细过滤后，经过特制的高压喷嘴雾化高速喷出，形成 $3 \sim 15\mu\text{m}$ 的水雾粒子，与流动的空气进行热交换，使空气的湿度增加，实现对空气的加湿处理，同时起到降温控制粉尘的作用。

Type of air filter (空气过滤器的类型)

Comparison figure-right (對照圖-右边)

Product type (产品型号) :

I.

The first letter represents the HIROSS's model. They are S, E, M, Q, W, V, I, L, and P series.

第一个英文字母表示 HIROSS 机组系列，分别为 S、E、M、Q、W、V、I、L 及 P 系列。

I: integrated machine series (一体机系列); V: evaporator (蒸发式系列); W: ceiling unit (吊顶式系列)

II.

The xx represents the approximate cooling capacity.

xx 英文字母表示进似的制冷量，以数字表示。

III.

The third letter represents the way of wind blowing. By using the letter to describe the different way of wind blowing is shown as following:

第三个英文字母表示不同送风方式，不同送风方式分别用不同英文字母表示，定义如下：

U – outlet (bottom); O – outlet (top); D – outlet (exchanging); G – outlet (gate); K – outlet (high accuracy); T – other purposes.

U – 下送风；O – 上送风；D – 置换送风；G – 格栅送风；K – 高精度型；T – 其他配置

IV.

The last letter represents the way of cooling. By using the letter to describe the way of cooling is shown as following:

第四个英文字母表示不同冷却方式，不同冷却方式分别用不同英文字母表示，定义如下：

A – air cooling 风冷；W – water cooling 水冷；D – air cooled dual-fluid 风冷双冷源；C – chilled water 冷冻水；E – free cooling 自由冷却；K – water cooled dual-fluid 水冷双冷源

Example: A customer makes a request for the cooling unit. The required specification is described as following: If M series is the best solution, the model can use the letter of "M" based on I to represent it. The cooling capacity is 30.7kW. The xx letter can use the number, "29" based on II, to represent it. The wind blowing is out from the bottom. The wind blowing can use the letter of "U" based on III to represent it. The way of cooling is used the water to cool down the equipment room. The way of cooling can use the letter of "W" based on IV to represent it. Finally, the model of HIROSS unit will use the letter, "M29UW", to represent it.

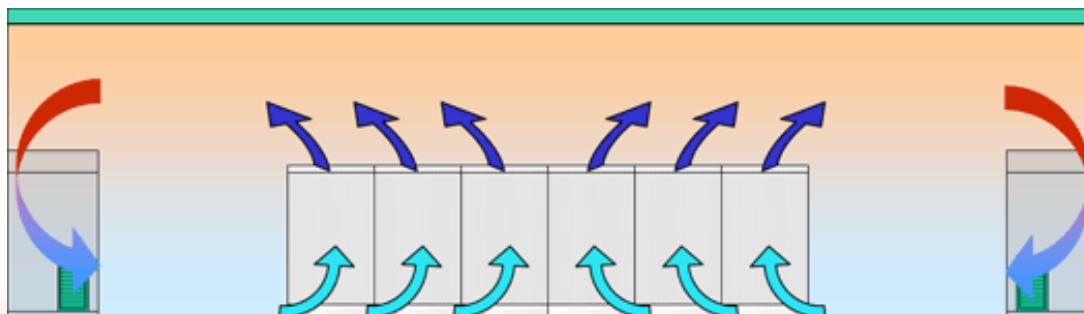

例如：依客户提出的要求。所要求的规格如下：如果 M 系列是最好的解决方案，可以用英文字母 “M” 代表它，依照 I 的规则。若冷却能力为 29KW。XX 可以使用数字 “29” 表示进似的制冷量，基于 II 的规则。送风方式若是下送风。送风方式可以使用英文字母 “U” 表示，基于 III 的规则。冷却的方式是使用水来冷却机房。因此冷却的方式可以使用英文字母 “W” 代表它，基于 IV 的规则。最后，此 HIROSS 机型的表示方式为 “M29UW” 。

The large surface area of evaporator coil improves the efficiency of units to ensure the effect of energy saving. The "V" structure of coil can make refrigeration system cycle match the refrigeration load. The air flow through the coil surface is smooth, and the "V" structure of coil also reduces the noise. When dehumidification, turn off the coil that only uses the part of 2/3. 65% of energy is used for dehumidification and it can effectively remove the moisture, greatly reduce the chance for reheating, and obviously provide the effect of energy saving.

超大表面积的蒸发器盘管，提高机组效率确保节能。采用“V型”结构盘管可使制冷系统的循环与制冷负荷相匹配，通过盘管表面的气流更加平稳，最大限度的降低机组噪声。除湿时，关掉部分盘管，只利用2/3的部分，将65%的能量用于除湿，更能有效地去掉湿气，大大减少再热器的启动，节能效果显著。

The floor bracket height is adjustable to make HIMOD series and movable floor in equipment room becoming one. With the use of frozen water units and natural cooling system will have the obvious effect for energy saving.

高度可调整的地板支架，可以使 HIMOD 系列模块机组与机房的活动地板成为一体。

冷冻水机组与自然冷却系统配合使用，会有显著的节能效果。

The indoor unit of HIMOD series can be matched with different wind hood. For bottom air supply, the unit can be connected with air inlet duct. For top air supply, top air supply hood can make air flow which is stable and uniform in the room. HIMOD 系列室内机组可匹配不同的风帽，在下送风机组中，可安装回风风管道与机组相连接。在上送风系统中，上送风风帽可使机房各个角落的气流稳定均匀。

Specifications for HIMOD M series (HIMOD M 系列规格):

Diffuse air flow (弥漫式送风) :			
Model (型号)	M25	M29	
Characteristics (性能)			
Total cooling cap. (总冷量)	kW	26.4	30.7
Humidity cap. (湿冷量)	kW	23.6	29.3
Hum. Heat ratio (湿热比)		0.89	0.90
EER (效能比)		3.56	3.39
Compressor Q. (压缩机数量)	n	1	1
Fan Q. (风机数量)	n	1	1
Wind rate (风量)	m³/h	6680	7470
Max. Pressure (最大风压-上/下风送)	Pa	0	0
Noise (噪音-下风送)	dB(A)	62	64
Length (长度)	mm	1200	1200
Width (宽度)	mm	800	800
Weight (净重)	kg	425	430

All routine maintenances of HIMOD series can be accessed in front and all parts can be taken out easily. Air filter can also be replaced in front. Under the normal operation condition, the maintenance for the refrigeration system can be carried out. Because the design of HIMOD series is very flexible, it can be utilized in a variety of ways of cooling.

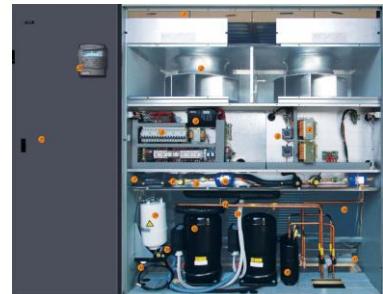

HIMOD 系列的所有日常维护工作都可以在机组的正面完成，所有的部件都可以从机组的正面取出来。空气过滤器可以从机组的正面进行更换。在机组正常运行的情况下，可以对制冷系统进行检修。由于 HIMOD 系列有非常灵活的设计，使其可以采用多种冷却方式。

HIROSS attaches great importance to environmental protection issues. Now, HIMOD series is used the refrigerant of R22 that is HCFC kind of refrigerant and the ozone damage index (ODP) value is very low. In addition, HIMOD series can also use R407C refrigerant -- now has been widely applied. In Europe, the new refrigeration equipment will not use R22 refrigerant after 2000. The air-conditioning system using new refrigerant can provide the same effect as R22 refrigerant. Need to pay attention to that the compression system using new refrigerant needs to replace the mineral oil with synthetic ester lubricant.

HIROSS 公司非常重视环境保护的问题。现在，HIMOD 系列标准型机组选用的是 R22 制冷剂，这是 HCFC 类制冷剂，其臭氧破坏指数 (ODP) 值非常低。此外，HIMOD 系列也可以选用 R407C 制冷剂——现在已经广泛地得到应用。在欧洲，公元 2000 年以后生产的新制冷设备中，将不再采用 R22 制冷剂，采用新型制冷剂的空调系统，可以提供与采用 R22 制冷剂相同的制冷功率。需注意的情况是，选用新型制冷剂的压缩系统，需使用合成酯类润滑剂替代矿物油。

The compressor is mounted on the rubber shock absorber base that reduces noise and vibration. And its design is in the outside of the air stream. Flow channel is the curvature design that reduces the noise.

压缩机安装在橡皮胶避震底座上，减少噪音和震动。并将其设计在气流之外。气流通道曲线设计，以减少噪音。

The standard diameter and electrical data series (标准管径及电气技术数据):

Model (型号)	Tube diameter for air (气管直径) (mm)	Tube diameter for liquid (液管直径) (mm)	Running current (运行电流) FLA(A)	Current protection (断路器保护电流) IΔ n=0.3A(400V)	Min. cable diameter (最小电缆线直径) (mm)
